

Universal Design for Learning

Beth Stark, UDL Consultant and Inclusionary Practices Strategist
for International Schools

KNOW

We will dig into:

- the goal of Universal Design for Learning.
- how to leverage the UDL Framework as a scaffold to reduce learning barriers.
- three key questions to consider as we begin the iterative UDL learning design process.

UNDERSTAND

We will explore:

- the importance of anticipating learning variability.
- the cause, types of variability and the factors that influence us as learners.
- the differences between universally designed learning and differentiated instruction.

DO

Together, we will choose to:

- construct universally designed routines to support self-determined and collaborative learning for all learners.
- access tools and strategies to reduce learning barriers in a current learning engagement.
- revise an assessment to optimize multiple means of action & expression.
